

Meet “*THEIA*” the next generation surveillance systems.

Theia, named after the Greek Goddess of the sight and the shining light, will help its users for:

- Border protection
- Critical infrastructure monitoring
- Petrochemical leaks (offshore & onshore) surveillance
- Pipeline quality control
- Traffic control under different weather conditions (such as fog)
- Endangered species control without disturbing their environments.
- Illegal fishing activities
- and any field of operations that require detailed capturing / online-processing / analysis / reporting

Main features:

- Night Vision with IR laser illumination
- Optically stabilized lens
- Interference avoiding high end GNSS unit
- Full remote control using 4G/5G networks and/or IP Mesh radios
- Range finder and Geo localization
- Active cooling system for extreme weather conditions
- Unmanned operation
- ITAR free
- Transportable
